## Security Audit Report

Completed on  
**July 21, 2023**

# OVERVIEW

This audit has been prepared for **CakeBot** to review the main aspects of the project to help investors make an informative decision during their research process.

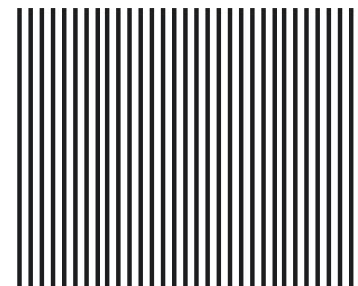

You will find a summarized review of the following key points:

- ✓ Contract's source code
- ✓ Owners' wallets
- ✓ Tokenomics
- ✓ Team transparency and goals
- ✓ Website's age, code, security and UX
- ✓ Whitepaper and roadmap
- ✓ Social media & online presence

*The results of this audit are purely based on the team's evaluation and does not guarantee nor reflect the projects outcome and goal*

- SPYWOLF Team -

# CakeBot

## PROJECT DESCRIPTION

### According to their whitepaper:

Introducing CakeBot, the world's first and fastest elite sniper bot, designed exclusively for the Binance Smart Chain.

The main goal of this Telegram bot is to combine the exceptional features of Maestro and Unibot to provide the finest trading experiences to Binance Smart Traders.

**Release Date:** Presale starts in July, 2023

**Category:** Token

01

# CONTRACT INFO

Token Name	Symbol
Vanish	Vanish
Contract Address	
0x6f4Dde2dDF242a3B10CD3C50D0aD0FBF5dDf996B	
Network	Language
Binance Smart Chain	Solidity
Deployment Date	Verified?
Jul 19, 2023	Yes
Total Supply	Status
1,000,000,000	Not launched

## TAXES

Buy Tax  
**5%**

Sell Tax  
**5%**

\*Taxes can be changed in future.

## Our Contract Review Process

The contract review process pays special attention to the following:

- ✓ Testing the smart contracts against both common and uncommon vulnerabilities
- ✓ Assessing the codebase to ensure compliance with current best practices and industry standards.
- ✓ Ensuring contract logic meets the specifications and intentions of the client.
- ✓ Cross referencing contract structure and implementation against similar smart contracts produced by industry leaders.
- ✓ Thorough line-by-line manual review of the entire codebase by industry experts.

### Blockchain security tools used:

- OpenZeppelin
- Mythril
- Solidity Compiler
- Hardhat

## TOKEN TRANSFERS STATS

Transfer Count	2
Uniq Senders	2
Uniq Receivers	2
Total Amount	2000000000 Vanish
Median Transfer Amount	1000000000 Vanish
Average Transfer Amount	1000000000 Vanish
First transfer date	2023-07-19
Last transfer date	2023-07-19
Days token transferred	1

## SMART CONTRACT STATS

Calls Count	3
External calls	3
Internal calls	0
Transactions count	3
Uniq Callers	1
Days contract called	1
Last transaction time	2023-07-19 09:43:32 UTC
Created	2023-07-19 09:36:58 UTC
Create TX	0xf4a04284d5ad4daf14c01067c66c8a31e727 234376134bd675ebfc4329a4a063
Creator	0x7a787ff7d51c742c7173318e2f93a787810d05 54

# VULNERABILITY CHECK

Design Logic	Passed
Compiler warnings.	Passed
Private user data leaks	Passed
Timestamp dependence	Passed
Integer overflow and underflow	Passed
Race conditions and reentrancy. Cross-function race conditions	Passed
Possible delays in data delivery	Passed
Oracle calls	Passed
Front running	Passed
DoS with Revert	Passed
DoS with block gas limit	Passed
Methods execution permissions	Passed
Economy model	Passed
Impact of the exchange rate on the logic	Passed
Malicious Event log	Passed
Scoping and declarations	Passed
Uninitialized storage pointers	Passed
Arithmetic accuracy	Passed
Cross-function race conditions	Passed
Safe Zeppelin module	Passed
Fallback function security	Passed

# THREAT LEVELS

When performing smart contract audits, our specialists look for known vulnerabilities as well as logical and access control issues within the code. The exploitation of these issues by malicious actors may cause serious financial damage to projects that failed to get an audit in time. We categorize these vulnerabilities by the following levels:

## High Risk

---

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

## Medium Risk

---

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

## Low Risk

---

Issues on this level are minor details and warning that can remain unfixed.

## Informational

---

Information level is to offer suggestions for improvement of efficacy or security for features with a risk free factor.

# FOUND THREATS

## ⚠ Medium Risk

If there are enough tokens accumulated for auto swap and auto swap is enabled and taxes are set to 0, totalETHFee's value will become zero (0) and contract will halt on sell.  
Division by zero (0) is impossible.

```
function _transfer(address sender, address recipient, uint256 amount) private returns (bool) {
    .....
    uint256 contractTokenBalance = balanceOf(address(this));
    bool overMinimumTokenBalance = contractTokenBalance >= minimumTokensBeforeSwap;

    if (overMinimumTokenBalance && !inSwapAndLiquify && !isMarketPair[sender] && swapAndLiquifyEnabled)
    {
        if(swapAndLiquifyByLimitOnly)
            contractTokenBalance = minimumTokensBeforeSwap;
        swapAndLiquify(contractTokenBalance);
    }
    .....
}

function swapAndLiquify(uint256 tAmount) private lockTheSwap {
    .....
    uint256 totalShares = _totalTaxIfBuying.add(_totalTaxIfSelling);
    uint256 totalETHFee = totalShares.sub(liquidityShare.div(2));

    uint256 amountETHLiquidity = receivedBalance.mul(liquidityShare).div(totalETHFee).div(2);
    uint256 amountETHMarketing = receivedBalance.mul(MarketingShare).div(totalETHFee);
    uint256 amountETHDeveloper = receivedBalance.sub(amountETHLiquidity).sub(amountETHMarketing);
    .....
}
```

- Recommendation:
  - Ensure that division by zero (0) won't occur

# FOUND THREATS

## ⚠️ Low Risk

Owner can change current router.  
If set to inappropriate router, contract might halt on sell.

```
function changeRouterVersion(address newRouterAddress) public onlyOwner returns(address newPairAddress) {  
  
    IUniswapV2Router02 _uniswapV2Router = IUniswapV2Router02(newRouterAddress);  
  
    newPairAddress = IUniswapV2Factory(_uniswapV2Router.factory()).getPair(address(this), _uniswapV2Router.WETH());  
  
    if(newPairAddress == address(0)) //Create If Doesn't exist  
    {  
        newPairAddress = IUniswapV2Factory(_uniswapV2Router.factory())  
            .createPair(address(this), _uniswapV2Router.WETH());  
    }  
  
    uniswapPair = newPairAddress; //Set new pair address  
    uniswapV2Router = _uniswapV2Router; //Set new router address  
  
    isMarketPair[address(uniswapPair)] = true;  
}
```

- Recommendation:
  - Router change is not recommended after token's launch.

## i Informational

Owner can withdraw any tokens from the contract except the native \$Vanish token.

When this function is present, in cases tokens sent into the contract by mistake or purposefully, contract's owner can retrieve them.

```
function rescueStuckToken(address _token, uint _amount) external onlyOwner {
    require(_token != address(this), "Owner can't claim contract's balance of its own tokens");
    IERC20(_token).transfer(msg.sender, _amount);
}

function rescueFunds() external onlyOwner {
    (bool os,) = payable(msg.sender).call{value: address(this).balance}("");
    require(os);
}
```

Owner can set buy/sell fees up to 12.5%.

Combined buy+sell = 25%.

When fees are above 0, there will be certain amount of tokens that will be deducted from every transaction that users make.

Deducted amount will be as much as the fees % from total amount that user had bought, sold and/or transferred.

```
function setBuyTaxes(uint _Liquidity, uint _Marketing , uint _Developer) public onlyOwner {
    _buyLiquidityFee = _Liquidity;
    _buyMarketingFee = _Marketing;
    _buyDeveloperFee = _Developer;
    _totalTaxIfBuying = _buyLiquidityFee.add(_buyMarketingFee).add(_buyDeveloperFee);
    require(_totalTaxIfBuying <= (feeUnits/8), "Buy fees must be 12.5% or less");
}

function setSellTaxes(uint _Liquidity, uint _Marketing , uint _Developer) public onlyOwner {
    _sellLiquidityFee = _Liquidity;
    _sellMarketingFee = _Marketing;
    _sellDeveloperFee = _Developer;
    _totalTaxIfSelling = _sellLiquidityFee.add(_sellMarketingFee).add(_sellDeveloperFee);
    require(_totalTaxIfSelling <= (feeUnits/8), "Sell fees must be 12.5% or less");
}
```

## i Informational

Owner can exclude address from fees.

When address is excluded from fees, the user will receive the whole amount of the bought, sold and/or transferred tokens.

```
function setIsExcludedFromFee(address account, bool newValue) public onlyOwner {  
    isExcludedFromFee[account] = newValue;  
}
```

Owner can exclude address from max transaction and max wallet limit.

```
function setIsTxLimitExempt(address holder, bool exempt) external onlyOwner {  
    isTxLimitExempt[holder] = exempt;  
}  
  
function setIsWalletLimitExempt(address holder, bool exempt) external onlyOwner {  
    isWalletLimitExempt[holder] = exempt;  
}
```

Owner can set max transaction limit but cannot lower it than 0.1% of total supply.

```
function setMaxTxAmount(uint256 maxTxAmount) external onlyOwner() {  
    require(maxTxAmount >= _totalSupply.mul(1).div(1000),  
        "Cannot set max TX amount lower than 0,1% of total supply");  
    _maxTxAmount = maxTxAmount;  
}
```

# RECOMMENDATIONS FOR **GOOD** PRACTICES

- 1** Consider fundamental tradeoffs
- 2** Be attentive to blockchain properties
- 3** Ensure careful rollouts
- 4** Keep contracts simple
- 5** Stay up to date and track development

## **CakeBot (Vanish token)**

### **GOOD PRACTICES FOUND**

- ✓ The owner cannot mint new tokens after deployment
- ✓ The owner can set a transaction limit, but can't lower it than 0.1% of total supply
- ✓ The smart contract utilizes "SafeMath" to prevent overflows

There is no information about the initial tokens distribution based on the project's whitepaper and/or website.

# THE TEAM

⚠️ The team is anonymous

## KYC INFORMATION

### No KYC

We recommend the team to get a KYC in order to ensure trust and transparency within the community.

# THE TEAM

The team has privately doxxed to SPYWOLF by completing the following KYC requirements:

- ID Verification
- Video statement
- Video interview with devs
- Owner's wallet verification

# Disclaimer

This report shows findings based on our limited project analysis, following good industry practice from the date of this report, in relation to cybersecurity vulnerabilities and issues in the framework and algorithms based on smart contracts, overall social media and website presence and team transparency details of which are set out in this report. In order to get a full view of our analysis, it is crucial for you to read the full report.

While we have done our best in conducting our analysis and producing this report, it is important to note that you should not rely on this report and cannot claim against us on the basis of what it says or doesn't say, or how we produced it, and it is important for you to conduct your own independent investigations before making any decisions. We go into more detail on this in the disclaimer below – please make sure to read it in full.

## **DISCLAIMER:**

By reading this report or any part of it, you agree to the terms of this disclaimer. If you do not agree to the terms, then please immediately cease reading this report, and delete and destroy any and all copies of this report downloaded and/or printed by you. This report is provided for information purposes only and on a non-reliance basis, and does not constitute investment advice.

No one shall have any right to rely on the report or its contents, and SpyWolf and its affiliates (including holding companies, shareholders, subsidiaries, employees, directors, officers and other representatives) (SpyWolf) owe no duty of care towards you or any other person, nor does SpyWolf make any warranty or representation to any person on the accuracy or completeness of the report.

The report is provided "as is", without any conditions, warranties or other terms of any kind except as set out in this disclaimer, and SpyWolf hereby excludes all representations, warranties, conditions and other terms (including, without limitation, the warranties implied by law of satisfactory quality, fitness for purpose and the use of reasonable care and skill) which, but for this clause, might have effect in relation to the report. Except and only to the extent that it is prohibited by law, SpyWolf hereby excludes all liability and responsibility, and neither you nor any other person shall have any claim against SpyWolf, for any amount or kind of loss or damage that may result to you or any other person (including without limitation, any direct, indirect, special, punitive, consequential or pure economic loss or damages, or any loss of income, profits, goodwill, data, contracts, use of money, or business interruption, and whether in delict, tort (including without limitation negligence), contract, breach of statutory duty, misrepresentation (whether innocent or negligent) or otherwise under any claim of any nature whatsoever in any jurisdiction) in any way arising from or connected with this report and the use, inability to use or the results of use of this report, and any reliance on this report. The analysis of the security is purely based on the smart contracts, website, social media and team.

No applications were reviewed for security. No product code has been reviewed.
