SPYWOLF

Security Audit Report

Audit prepared for

Life2App

Completed on

July 14, 2025

SPYWOLF.CO @SPYWOLFNETWORK @SPYWOLFNETWORK

KEY RESULTS

Cannot mint new tokens	Passed
Cannot pause trading (honeypot)	Passed
Cannot blacklist an address	Passed
Cannot raise taxes over 25%?	Passed
No proxy contract detected	Passed
Not required to enable trading	Not Passed
No hidden ownership	Passed
Cannot change the router	Passed
No cooldown feature found	Passed
Bot protection delay is lower than 5 blocks	Passed
Cannot set max tx amount below 0.05% of total supply	Passed
The contract cannot be self-destructed by owner	Passed

For a more detailed and thorough examination of the heightened risks, refer to the subsequent parts of the report.

OVERVIEW

This goal of this report is to review the main aspects of the project to help investors make an informative decision during their research process.

You will find a a summarized review of the following key points:

- Contract's source code
- Owners' wallets
- Tokenomics
- Team transparency and goals
- Website's age, code, security and UX
- Whitepaper and roadmap
- Social media & online presence

The results of this audit are purely based on the team's evaluation and does not guarantee nor reflect the projects outcome and goal

- SPYWOLF Team -

L2APP

PROJECT DESCRIPTION

According to their whitepaper:
We're creating the first web3 online map with unique AI features. It’s a perfect marketing tool for businesses, where businesses pay for actual visits to their shops. We believe that one day it will replace Google Maps.

Release Date: Presale starts in 2025.07.14 18:00 (UTC)

Category: Token

CONTRACT INFO

Token Name Life2App Token	Symbol L2APP
Contract Address 0x5E33769232c80db63EFbBF58bBD6c0925AaBAfC1	
Network Binance Smart Chain	Language Solidity
Deployment Date Jun-17-2024	Contract Type Token
Total Supply 1,000,000,000	Status Launched

TAXES

Buy Tax
3%

Sell Tax
3%

*Max Buy/Sell Tax: Can be raised to 5%.

Our Contract Review Process

The contract review process pays special attention to the following:

- Testing the smart contracts against both common and uncommon vulnerabilities
- Assessing the codebase to ensure compliance with current best practices and industry standards.
- Ensuring contract logic meets the specifications and intentions of the client.
- Cross referencing contract structure and implementation against similar smart contracts produced by industry leaders.
- Thorough line-by-line manual review of the entire codebase by industry experts.

Blockchain security tools used:

- OpenZeppelin
- Mythril
- Solidity Compiler
- Hardhat

VULNERABILITY ANALYSIS

ID	Title	
SWC-100	Function Default Visibility	**Passed**
SWC-101	Integer Overflow and Underflow	**Passed**
SWC-102	Outdated Compiler Version	**Passed**
SWC-103	Floating Pragma	**Passed**
SWC-104	Unchecked Call Return Value	**Passed**
SWC-105	Unprotected Ether Withdrawal	**Passed**
SWC-106	Unprotected SELFDESTRUCT Instruction	**Passed**
SWC-107	Reentrancy	**Passed**
SWC-108	State Variable Default Visibility	**Passed**
SWC-109	Uninitialized Storage Pointer	**Passed**
SWC-110	Assert Violation	**Passed**
SWC-111	Use of Deprecated Solidity Functions	**Passed**
SWC-112	Delegatecall to Untrusted Callee	**Passed**
SWC-113	DoS with Failed Call	**Passed**
SWC-114	Transaction Order Dependence	**Passed**
SWC-115	Authorization through tx.origin	**Passed**
SWC-116	Block values as a proxy for time	**Passed**
SWC-117	Signature Malleability	**Passed**
SWC-118	Incorrect Constructor Name	**Passed**

VULNERABILITY ANALYSIS

ID	Title	
SWC-119	Shadowing State Variables	Passed
SWC-120	Weak Sources of Randomness from Chain Attributes	Passed
SWC-121	Missing Protection against Signature Replay Attacks	Passed
SWC-122	Lack of Proper Signature Verification	Passed
SWC-123	Requirement Violation	Passed
SWC-124	Write to Arbitrary Storage Location	Passed
SWC-125	Incorrect Inheritance Order	Passed
SWC-126	Insufficient Gas Griefing	Passed
SWC-127	Arbitrary Jump with Function Type Variable	Passed
SWC-128	DoS With Block Gas Limit	Passed
SWC-129	Typographical Error	Passed
SWC-130	Right-To-Left-Override control character (U+202E)	Passed
SWC-131	Presence of unused variables	Passed
SWC-132	Unexpected Ether balance	Passed
SWC-133	Hash Collisions With Multiple Variable Length Arguments	Passed
SWC-134	Message call with hardcoded gas amount	Passed
SWC-135	Code With No Effects	Passed
SWC-136	Unencrypted Private Data On-Chain	Passed

VULNERABILITY ANALYSIS

NO ERRORS FOUND

MANUAL
CODE REVIEW

When performing smart contract audits, our specialists look for known vulnerabilities as well as logical and access control issues within the code. The exploitation of these issues by malicious actors may cause serious financial damage to projects that failed to get an audit in time.

We categorize these vulnerabilities by 4 different threat levels.

THREAT LEVELS

High Risk

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

Medium Risk

Issues on this level are critical to the smart contract's performance, functionality and should be fixed before moving to a live environment.

Low Risk

Issues on this level are minor details and warning that can remain unfixed.

Informational

Information level is to offer suggestions for improvement of efficacy or security for features with a risk free factor.

FOUND THREATS

Medium Risk

Trading not yet enabled at the time of audit

Trading on decentralized exchanges is not yet enabled for L2APP. As this is a manual launch, the team must call a specific function in the contract to permit trading. To build investor confidence and provide greater security, the community is encouraging the team to enable trading before the presale concludes, which is a standard trust-building practice for manual launches.

Additional note:

The smart contract for this token is technically secure and adheres to common industry standards without any apparent vulnerabilities.

Investors should be aware that the project's tokenomics involve a significant portion of the supply currently held in team-controlled wallets. The team has publicly communicated that this is an intentional part of their strategy, which includes a manual launch. They have also stated their intention to lock these holdings in a dedicated smart contract before the token goes live on a decentralized exchange.

This approach means that the project's launch and stability are contingent on the team executing these future on-chain actions as promised. We strongly encourage all potential investors to conduct their own due diligence by carefully reading the official whitepaper to fully understand the team's documented roadmap and the reasoning behind their token management strategy. For more details, read the whitepaper:

https://docs.google.com/document/d/12mLYarBiTsdgo-RE75XPGG1NWQFIFA0P8kT_HaL9RDI/edit?tab=t.0#heading=h.ngc57gs7hu2z

FOUND THREATS

Informational

Pinksale Manual Launch

The project is utilizing Pinksale for a manual presale, where the team is responsible for creating the PancakeSwap liquidity pool themselves after the fundraiser. The presale contract currently holds 4,903,216 L2APP, a small fraction of the 1,000,000,000 total supply.

https://www.pinksale.finance/launchpad/bsc/0xddAdAAf000935Ea8B76a07aEdF291Fb3f1b86040?refId=0x93a3d8530a55b3114df87f8975af0714fee66ee9

Transaction Tax System

A 3% tax is applied to every buy and sell transaction on decentralized exchanges. This revenue is automatically converted to BNB and sent to the team's treasury wallet. The owner can adjust this tax rate up to a maximum of 5%.

Centralized Token Distribution

The current on-chain holder distribution is highly centralized, with a single wallet holding approximately 96% of the total supply. The team has stated their intention is to lock these tokens before the public launch on a decentralized exchange.

*The following tokenomics are based on the project's whitepaper:

- 15% to investors including early backers and participants in private or pre-sale rounds
- 5% to advisors and partners, ecosystem development
- 5% for transactions fees
- 10% marketing and community
- 25% to the team with a lockup period'15% open market sale after project launch for businesses promoting themselves through the app
- 25% for weekly pools to be distributed to players.

A fixed number of L2APP tokens will be distributed in proportion to the L2APPGEM tokens earned during the week to all active players through pools created by the DAO. L2APPGEM tokens are burned in the process.

Token Deflation Event:

The Life2app project carries the idea of monetizing a user's time and activity. A user performs some actions every second.

1 year = 365 days

1 day = 24 hours

1 hour = 60 minutes

1 minute = 60 seconds

365*24*60*60*60 = 31,536,000 seconds in a year.

For the first 4 years, 31,536,000 L2APP tokens will be distributed to users annually until halving occurs. Starting from 2028, there will be a halving of the tokens distributed every leap year. Users will receive approximately 252 million tokens for their activity in the next 100 years, representing roughly 25% of the total token supply. [Halving process described here.]

Token Value: The value of the L2APP token will be determined by market demand from businesses, token supply in circulation, and the liquidity of the L2APP pools.

Token Utility: L2APP can be utilized for governance decisions in the DAO, staking, in-game transactions, and as a store of value.

Token Transfer: L2APP tokens can be transferred to other users.

Disclaimer

This report shows findings based on our limited project analysis, following good industry practice from the date of this report, in relation to cybersecurity vulnerabilities and issues in the framework and algorithms based on smart contracts, overall social media and website presence and team transparency details of which are set out in this report. In order to get a full view of our analysis, it is crucial for you to read the full report.
While we have done our best in conducting our analysis and producing this report, it is important to note that you should not rely on this report and cannot claim against us on the basis of what it says or doesn't say, or how we produced it, and it is important for you to conduct your own independent investigations before making any decisions. We go into more detail on this in the disclaimer below – please make sure to read it in full.

DISCLAIMER:
By reading this report or any part of it, you agree to the terms of this disclaimer. If you do not agree to the terms, then please immediately cease reading this report, and delete and destroy any and all copies of this report downloaded and/or printed by you. This report is provided for information purposes only and on a non-reliance basis, and does not constitute investment advice.
No one shall have any right to rely on the report or its contents, and SpyWolf and its affiliates (including holding companies, shareholders, subsidiaries, employees, directors, officers and other representatives) (SpyWolf) owe no duty of care towards you or any other person, nor does SpyWolf make any warranty or representation to any person on the accuracy or completeness of the report.
The report is provided "as is", without any conditions, warranties or other terms of any kind except as set out in this disclaimer, and SpyWolf hereby excludes all representations, warranties, conditions and other terms (including, without limitation, the warranties implied by law of satisfactory quality, fitness for purpose and the use of reasonable care and skill) which, but for this clause, might have effect in relation to the report. Except and only to the extent that it is prohibited by law, SpyWolf hereby excludes all liability and responsibility, and neither you nor any other person shall have any claim against SpyWolf, for any amount or kind of loss or damage that may result to you or any other person (including without limitation, any direct, indirect, special, punitive, consequential or pure economic loss or damages, or any loss of income, profits, goodwill, data, contracts, use of money, or business interruption, and whether in delict, tort (including without limitation negligence), contract, breach of statutory duty, misrepresentation (whether innocent or negligent) or otherwise under any claim of any nature whatsoever in any jurisdiction) in any way arising from or connected with this report and the use, inability to use or the results of use of this report, and any reliance on this report. The analysis of the security is purely based on the smart contracts, website, social media and team.
No applications were reviewed for security. No product code has been reviewed.
